

Access Mail Accounts from Android

To set up DSE mail accounts on Android, you can follow the below steps:

1. Open the Gmail app and touch the menu on the top left.
2. Select the 'Add account' and on the setup email screen select 'Personal (IMAP) option.
3. Specify the full email address on the next screen and press next. For example, admin@example.com.
4. Specify the type of account as IMAP on the next screen.
5. Specify the password of your email account on the next screen and click 'Next'.
6. In the next screen, you can see the settings of an incoming server in that you can specify the port number as per the protocol and click Next. DSE Mail Servers: Incoming = imap.dse-inc.net (Port 993).
7. Click 'Next'. This screen displays the settings for an outgoing server. Outgoing mail server = smtp.dse-inc.net (Port 465).
8. Your Android device now checks the connection to the servers, and it also creates your mail account. You can see the newly created account list in the Gmail app.
